

REMARKS

Upon entry of the foregoing Amendment, claims 1-38 are pending in the application. Claims 1, 13, 25, 37 and 38 have been amended. No claims are cancelled or added. In view of the foregoing Amendment and following Remarks, allowance of all the pending claims is requested.

SPECIFICATION

The specification has been amended to correct minor informalities identified with the description. Applicant submits that the changes to the specification described above do not constitute the addition of new matter, as these changes only correct minor typographical informalities.

REJECTIONS UNDER 35 U.S.C. §103(a)

The Examiner has rejected claims 1-38 under 35 U.S.C. § 103(a) as allegedly being unpatentable over U.S. Patent Application No. 2004/0268314 to Pardon et al. ("Pardon") in view of U.S. Patent No. 6,671,686 to Kollman et al. ("Kollman"), and further in view of U.S. Patent No. 6,748,555 to Teegan et al. ("Teegan"). Applicant traverses these rejections because the combination of references relied upon by the Examiner fails to teach or suggest each of the features of the invention.

As acknowledged by the Examiner, Pardon fails to teach or suggest an analyzer component. See, OA page 3, paragraph 2. Kollman and/or Teegan, either alone or in combination with one another fail to address this deficiency of Pardon. For at least this reason, the rejection of the claims based on these references is improper and must be withdrawn.

Nonetheless, solely in an effort to expedite prosecution of this matter, Applicants have amended the claims. For example, amended claim 1 recites, *inter alia*,
an analyzer component operable to:

correlate in substantially continuously real time a first database call
and a second database call generated by one of the processes with a
particular process call;

...

monitor substantially continuously the one or more parameters associated with the first database call and the second database call; and display to a client ...

The references relied upon by the Examiner, either alone or in combination with one another fail to teach or suggest at least these features of the claimed invention. For at least this additional reason, the rejection of claim 1 is improper and must be withdrawn.

Claims 13, 25, 37 and 38 have been amended to include features similar to those discussed above with regard to claim 1. Thus, the rejections of these claims based on the references relied upon by the Examiner must also be withdrawn for at least the reasons set forth above for claim 1. Claims 2-12, 14-24, 26-36, depend from and add features to claims 1, 13, 25 and 37. The rejections of these claims must be withdrawn for similar reasons.

CONCLUSION

Having addressed each of the foregoing rejections, it is respectfully submitted that a full and complete response has been made to the outstanding Office Action and, as such, the application is in condition for allowance. Notice to that effect is respectfully requested.

If the Examiner believes, for any reason, that personal communication will expedite prosecution of this application, the Examiner is invited to telephone the undersigned at the number provided.

Date: December 8, 2006

Respectfully submitted,

By:
